**Jasper City Schools Curriculum Map**

**Course Name:** Pre AP Algebra 2/Trig

**Unit Name:** Introduction to Algebra II: The Purpose and Predictability of Patterns

<table>
<thead>
<tr>
<th>Time Frame</th>
<th>7 days</th>
</tr>
</thead>
</table>

**Unit Standards**

A.1. Skills Acquired by Students
- Identify properties of real numbers and use them and the correct order of operations to simplify expressions
- Use inductive reasoning to make conjectures and deductive reasoning to arrive at valid conclusions

B.1. Mathematical Processes
- Apply problem-solving skills (e.g., identifying irrelevant or missing information, making conjectures, extracting mathematical meaning, recognizing and performing multiple steps when needed, verifying results in the context of the problem) to the solution of real-world problems
- Use a variety of strategies to set up and solve increasingly complex problems
- Represent data, real-world situations, and solutions in increasingly complex contexts (e.g., expressions, formulas, tables, charts, graphs, relations, functions) and understand the relationships
- Use the language of mathematics to communicate increasingly complex ideas orally and in writing, using symbols and notations correctly
- Make appropriate use of estimation and mental mathematics in computations and to determine the reasonableness of solutions to increasingly complex problems
- Make mathematical connections among concepts, across disciplines, and in everyday experiences
- Demonstrate the appropriate role of technology (e.g., calculators, software programs) in mathematics (e.g., organize data, develop concepts, explore relationships, decrease time spent on computations after a skill has been established)

**B.1. Mathematical Processes**
- Apply previously learned algebraic and geometric concepts to more advanced problems

**H.2. Sequences and Series**
- Find the $n^{th}$ term of an arithmetic or geometric sequence
- Find the position of a given term of an arithmetic or geometric sequence
- Find sums of a finite arithmetic or geometric series
- Use sequences and series to solve real-world problems
- Use sigma notation to express sums

**Unit Essential Questions**

How can you represent the terms of a sequence explicitly?
How can you represent them recursively?
What are equivalent explicit and recursive definitions for an arithmetic sequence?
How can you model a geometric sequence?
How can you model its sum?

**Unit Essential Vocabulary**

1. arithmetic sequence
2. arithmetic series
3. common difference
4. common ratio
5. explicit formula
6. geometric series
7. geometric sequence
8. recursive formula

- Unit Test, Quiz, Warm ups, 3-2-1

**Assessment Data:**

- 7 days
## Course Name: Pre AP Algebra 2/Trig

### Unit Name: Linear Equations and Inequalities

**Time Frame:** 7 days

### Unit Standards

- **B.1. Mathematical Processes**
  a. Apply problem-solving skills (e.g., identifying irrelevant or missing information, making conjectures, extracting mathematical meaning, recognizing and performing multiple steps when needed, verifying results in the context of the problem) to the solution of real-world problems
  b. Use a variety of strategies to set up and solve increasingly complex problems
  c. Represent data, real-world situations, and solutions in increasingly complex contexts (e.g., expressions, formulas, tables, charts, graphs, relations, functions) and understand the relationships
  d. Use the language of mathematics to communicate increasingly complex ideas orally and in writing, using symbols and notations correctly
  e. Make appropriate use of estimation and mental mathematics in computations and to determine the reasonableness of solutions to increasingly complex problems
  f. Make mathematical connections among concepts, across disciplines, and in everyday experiences
  g. Demonstrate the appropriate role of technology (e.g., calculators, software programs) in mathematics (e.g., organize data, develop concepts, explore relationships, decrease time spent on computations after a skill has been established)
  h. Apply previously learned algebraic and geometric concepts to more advanced problems

- **D.1. Expressions, Equations, and Inequalities**
  a. Solve linear inequalities containing absolute value
  b. Solve compound inequalities containing "and" and "or" and graph the solution set
  c. Solve algebraically a system containing three variables

- **D.2. Graphs, Relations, and Functions**
  a. Graph a system of linear inequalities in two variables with and without technology to find the solution set to the system
  b. Solve linear programming problems by finding maximum and minimum values of a function over a region defined by linear inequalities

### Unit Essential Questions

- How do you solve an equation or inequality?
- How do you solve a system?
- How does representing functions graphically help you solve a system of inequalities?

### Unit Essential Vocabulary

1. absolute value
2. compound inequality
3. term
4. variable
5. Dependent system
6. Independent system

### Unit Standards

- **B.1. MATHEMATICAL PROCESSES**
  - a. Apply problem-solving skills (e.g., identifying irrelevant or missing information, making conjectures, extracting mathematical meaning, recognizing and performing multiple steps when needed, verifying results in the context of the problem) to the solution of real-world problems
  - b. Use a variety of strategies to set up and solve increasingly complex problems
  - c. Represent data, real-world situations, and solutions in increasingly complex contexts (e.g., expressions, formulas, tables, charts, graphs, relations, functions) and understand the relationships
  - d. Use the language of mathematics to communicate increasingly complex ideas orally and in writing, using symbols and notations correctly
  - e. Make appropriate use of estimation and mental mathematics in computations and to determine the reasonableness of solutions to increasingly complex problems
  - f. Make mathematical connections among concepts, across disciplines, and in everyday experiences
  - g. Demonstrate the appropriate role of technology (e.g., calculators, software programs) in mathematics (e.g., organize data, develop concepts, explore relationships, decrease time spent on computations after a skill has been established)
  - h. Apply previously learned algebraic and geometric concepts to more advanced problems

- **D.1. Expressions, Equations, and Inequalities**
  - c. Solve algebraically a system containing three variables

### Unit Essential Questions

1. How can you add, subtract, and multiply arrays of numbers?
2. How can you use a matrix to represent and solve a system of equations?

### Unit Essential Vocabulary

1. ELEMENTS
2. MATRIX EQUATION
3. ZERO MATRIX
4. EQUAL MATRICES
5. SQUARE MATRIX
6. INVERSE OF MATRICES
7. DETERMINANT OF MATRIX
8. COEFFICIENT MATRIX
9. VARIABLE MATRIX
10. CONSTANT MATRIX

### Assessment(s)

- Unit Test, Quiz, Warm ups, 3-2-1
## Course Name: Pre AP Algebra 2/Trig

### Unit Name: Functions, Relations, and Conics

#### Time Frame: 7 days

**Unit Standards**

- B.1. Mathematical Processes
  - a. Apply problem-solving skills (e.g., identifying irrelevant or missing information, making conjectures, extracting mathematical meaning, recognizing and performing multiple steps when needed, verifying results in the context of the problem) to the solution of real-world problems
  - b. Use a variety of strategies to set up and solve increasingly complex problems
  - c. Represent data, real-world situations, and solutions in increasingly complex contexts (e.g., expressions, formulas, tables, charts, graphs, relations, functions) and understand the relationships
  - d. Use the language of mathematics to communicate increasingly complex ideas orally and in writing, using symbols and notations correctly
  - e. Make appropriate use of estimation and mental mathematics in computations and to determine the reasonableness of solutions to increasingly complex problems
  - f. Make mathematical connections among concepts, across disciplines, and in everyday experiences
  - g. Demonstrate the appropriate role of technology (e.g., calculators, software programs) in mathematics (e.g., organize data, develop concepts, explore relationships, decrease time spent on computations after a skill has been established)
  - h. Apply previously learned algebraic and geometric concepts to more advanced problems

- C.1. Foundations
  - a. Identify complex numbers and write their conjugates
  - b. Add, subtract, and multiply complex numbers
  - c. Simplify quotients of complex numbers
  - d. Perform operations on functions, including function composition, and determine domain and range for each of the given functions

- E.2. Graphs, Relations, and Functions
  - a. Determine the domain and range of a quadratic function;
  - b. Use transformations (e.g., translation, reflection) to draw the graph of a relation and determine a relation that fits a graph

- E.3. Conic Sections
  - a. Identify conic sections (e.g., parabola, circle, ellipse, hyperbola) from their equations in standard form
  - b. Graph circles and parabolas and their translations from given equations or characteristics with and without technology
  - c. Determine characteristics of circles and parabolas from their equations and graphs
  - d. Identify and write equations for circles and parabolas from given characteristics and graphs

**Unit Essential Questions**

- How do you add, subtract, multiply and find composite functions?
- What is the domain and range of a quadratic function?
- What are the advantages of a quadratic function in vertex form? In standard form?
- How is any quadratic function related to the parent quadratic function $y = x^2$?
- How are the real solutions of a quadratic equation related to the graph of the related quadratic function?
- What is the difference between the algebraic representations of conics?

**Unit Essential Vocabulary**

1. Domain
2. Range
3. Composite Functions
4. Quadratic Functions and Equations
5. Axis of Symmetry
6. Parabola
7. Vertex Form
8. Circle
9. Radius
10. Directrix
11. Focus

  - h. Apply previously learned algebraic and geometric concepts to more advanced problem

- **C.1. Foundations**
  - a. Identify complex numbers and write their conjugates
  - b. Add, subtract, and multiply complex numbers
  - c. Simplify quotients of complex numbers

- **E.1. Equations and Inequalities**
  - a. Solve quadratic equations and inequalities using various techniques, including completing the square and using the quadratic formula
  - b. Use the discriminant to determine the number and type of roots for a given quadratic equation
  - c. Solve quadratic equations with complex number solutions
  - d. Solve quadratic systems graphically and algebraically with and without technology

- **E.2. Graphs, Relations, and Functions**
  - b. Use transformations (e.g., translation, reflection) to draw the graph of a relation and determine a relation that fits a graph
  - c. Graph a system of quadratic inequalities with and without technology to find the solution set to the system

#### Unit Essential Questions

1. How do you perform operations on complex numbers?
2. How is the process of completing the square used to solve quadratic equations?
3. How do you use the quadratic formula and the discriminant?
4. How can you tell if a quadratic equation has one or two solutions?
5. How do you solve systems of quadratic inequalities?

#### Unit Essential Vocabulary

1. Complex numbers
2. Complex conjugates
3. Discriminant
4. Imaginary number
5. Completing the square
6. Quadratic formula

### Unit Standards

- **F. Exploring Polynomial Expressions, Equations, and Functions**
- 1. Expressions and Equations
- a. Evaluate and simplify polynomial expressions and equations
- b. Factor polynomials using a variety of methods (e.g., factor theorem, synthetic division, long division, sums and differences of cubes, grouping)

### Unit Essential Questions

1. What are the special product patterns?
2. How can you solve a higher-degree polynomial equation?
3. When you factor a quadratic how can you check to see that you have the correct answer?
4. What should always be your first step when you are asked to factor a polynomial?

### Unit Essential Vocabulary

1. Like Terms
2. Factored completely
3. Factor by grouping
4. Sum and differences of cubes

| Unit Standards | 3. Trigonometric and Periodic Functions  
a. Use the law of cosines and the law of sines \( \text{to find the lengths of sides and measures of angles of triangles in mathematical and real-world problems} \)  
b. Use the unit-circle definition of the trigonometric functions and trigonometric relationships to find trigonometric values for general angles  
c. Measure angles in standard position using degree or radian measure and convert a measure from one unit to the other  
d. Graph the sine and cosine functions with and without technology  
e. Determine the domain and range of the sine and cosine functions, given a graph  
f. Find the period and amplitude of the sine and cosine functions, given a graph  
g. Use sine, cosine, and tangent functions, including their domains and ranges, periodic nature, and graphs, to interpret and analyze relations |

| Unit Essential Questions | How do you graph sine and cosine functions?  
What is the amplitude and period?  
What is the domain and range?  
What is the maximum and minimum?  
How do we solve right triangles and any triangle?  
How do we change from degrees to radians and radians to degrees?  
How do we use the unit circle?  
How do we find the area of any triangle? |

| Unit Standards | G. Exploring Advanced Functions  
1. Rational and Radical Expressions, Equations, and Functions  
a. Solve mathematical and real-world rational equation problems (e.g., work or rate problems)  
b. Simplify radicals that have various indices  
c. Use properties of roots and rational exponents to evaluate and simplify expressions  
d. Add, subtract, multiply, and divide expressions containing radicals  
e. Rationalize denominators containing radicals and find the simplest common denominator  
f. Evaluate expressions and solve equations containing in the roots or rational exponents  
g. Evaluate and solve radical equations given a formula for a real-world situation |

| Unit Essential Questions | How do you simplify radicals that have various indices?  
How do you add, subtract, multiply, and divide expressions containing radicals?  
How do you rationalize denominators?  
How do you solve equations with radicals? |

| Unit Essential Vocabulary | 1. Indices  
2. nth root of a radical  
3. radical  
4. conjugate |
